

WORKEY Dashboard QA Test Plan

Use this checklist to test the admin dashboard and employer dashboard step by step.

Test Accounts

Role	Email	Password	Notes
Admin	admin@workey.test	password	Use for admin dashboard, companies, users, reports, audit logs, and notifications.
Employer	employer.second@workey.test	password	Use for employer dashboard, company, jobs, applicants, tests, interviews, and notifications.

Test Result Key

Mark	Meaning
Pass	Feature works as expected.
Fail	Feature is broken or returns the wrong result.
Blocked	Cannot test because backend, candidate/mobile app, data, or permissions are missing.
Partial	Main flow works, but there is a UX, data, or edge-case issue.

Before Testing

- ☐ Backend server is running.
- ☐ Frontend server is running.
- ☐ Browser cache is cleared or a private window is used.
- ☐ API base URL points to the correct backend environment.
- ☐ Admin and employer accounts can log in.
- ☐ Test browser console is open to catch frontend errors.
- ☐ Network tab is open to check failed API calls.

Admin Dashboard Tests

A1. Admin Login

Field	Value
Route	/login
Account	admin@workey.test
Expected	Admin logs in and lands on the admin dashboard.
Result	
Notes	

Steps:

1. Open the login page.
2. Enter admin email and password.
3. Submit the form.
4. Confirm the app redirects to the admin area.
5. Confirm sidebar, header, account menu, and logout controls render correctly.

A2. Admin Dashboard Overview

Field	Value
Route	/admin
Expected	Main statistics, attention queues, and charts load without page-level failure.
Result	
Notes	

Steps:

1. Open the admin dashboard.
2. Check all statistic cards.
3. Check charts and distribution widgets.
4. Refresh the page.
5. Confirm no blank page, console crash, or broken layout.

A3. Admin Companies List

Field	Value
Route	/admin/companies
Expected	Companies table loads with search, filters, status labels, pagination, and row actions.
Result	
Notes	

Steps:

1. Open companies.
2. Search by company name.
3. Filter by status: pending, approved, rejected, suspended.
4. Open a company details page.
5. Return to list and confirm filters/pagination still behave correctly.

A4. Admin Create Company

Field	Value
Route	/admin/companies
Backend	POST /admin/companies
Expected	Admin can create a company and see success/error feedback.
Result	
Notes	

Steps:

1. Click create company.
2. Fill required company fields.
3. Submit.
4. Confirm success message.
5. Confirm new company appears in the list or details view.
6. Try submitting invalid data and confirm validation messages are clear.

A5. Admin Edit Company

Field	Value
Route	/admin/companies/{id}
Backend	PUT/PATCH /admin/companies/{company}
Expected	Admin can update company profile fields without leaving the dashboard.
Result	
Notes	

Steps:

1. Open an existing company.
2. Click edit.
3. Change safe profile fields such as name, website, description, or location.
4. Save.
5. Refresh details page.
6. Confirm updated values persist.

A6. Admin Company Approval States

Field	Value
Route	/admin/companies/{id}
Expected	Pending, approved, rejected, and suspended states render correctly.
Result	
Notes	

Steps:

1. Open a pending company.
2. Approve it and confirm status changes.
3. Reject a test company with a reason.
4. Suspend a test company with a reason.
5. Confirm status badges and available actions match the current state.
6. Log in as employer for that company and confirm gated pages match the company state.

A7. Admin Company Invitations

Field	Value
Route	/admin/companies/{id}
Backend	GET /admin/companies/{company}/invitations
Expected	Admin can view invitation list and copy one-time invite links when returned.
Result	
Notes	

Steps:

1. Open company details.
2. Open invitations section.
3. Create an invitation.
4. Confirm pending invitation appears.
5. Copy the returned token/link if backend returns it.
6. Check whether resend/revoke actions exist.

A8. Admin Company Members

Field	Value
Route	/admin/companies/{id}
Backend	PATCH /admin/companies/{company}/members/{user}/status
Expected	Admin can suspend, reactivate, remove members, and transfer ownership safely.
Result	
Notes	

Steps:

1. Open company members.
2. Suspend a non-owner member with a reason.
3. Reactivate the member.
4. Remove a test member with confirmation.
5. Transfer ownership only on safe test data.
6. Confirm success/error messages are clear.

A9. Admin Users

Field	Value
Route	/admin/users
Expected	Users table loads and user details do not imply missing backend data is loaded.
Result	
Notes	

Steps:

1. Open users list.
2. Search and filter users.
3. Open a user details page.
4. Check overview tab.
5. Check activity, security, and related tabs.
6. Confirm unavailable operational panels show degraded backend-coverage messages.

A10. Admin Jobs And Applications

Field	Value
Routes	/admin/jobs , /admin/applications
Expected	Tables load real backend data and links do not break.
Result	
Notes	

Steps:

1. Open admin jobs.
2. Search, filter, and open job details.
3. Open admin applications.
4. Search, filter, and inspect application rows.
5. Confirm empty states are clear if no data exists.

A11. Admin Skills And Tests

Field	Value
Routes	/admin/skills , /admin/tests
Expected	Admin can view and manage skills/tests according to available backend permissions.
Result	
Notes	

Steps:

1. Open skills.
2. Create, edit, or disable a safe test skill if permissions allow it.
3. Open tests.
4. Create or edit a safe test record if permissions allow it.
5. Confirm validation and error messages are understandable.

A12. Admin Reports

Field	Value
Routes	/admin/reports/*
Backend	GET /admin/reports/overview , /applications , /jobs , /cv-parsing
Expected	Reports load and filters match backend response shape.
Result	
Notes	

Steps:

1. Open reports overview.
2. Open applications report.
3. Open jobs report.
4. Open CV parsing report.
5. Apply available filters.
6. Confirm charts and numbers update without console errors.

A13. Admin Audit Logs

Field	Value
Route	/admin/audit-logs
Backend	GET /admin/audit-logs
Expected	Audit logs load with supported filters.
Result	
Notes	Known previous result: backend returned 500 Internal Server Error .

Steps:

1. Open audit logs.
2. Confirm whether the table loads.
3. Apply date/user/action filters.
4. Check failed network calls.
5. If backend still returns 500 , mark as blocked by backend.

A14. Admin Notifications

Field	Value
Route	/admin/notifications
Backend	GET /notifications , GET /notifications/unread-count , PATCH /notifications/read-all , PATCH /notifications/{id}/read
Expected	Notifications list and unread count stay in sync.
Result	
Notes	

Steps:

1. Open notifications.
2. Confirm list loads.
3. Mark one notification as read.
4. Confirm unread count changes.
5. Mark all as read.
6. Refresh and confirm state persists.

Employer Dashboard Tests

E1. Employer Login

Field	Value
Route	/login
Account	employer.second@workey.test
Expected	Employer logs in and lands on the employer dashboard.
Result	
Notes	

Steps:

1. Open the login page.
2. Enter employer email and password.
3. Submit the form.
4. Confirm redirect to employer dashboard.
5. Confirm sidebar, header, account menu, and logout controls render correctly.

E2. Employer Company Gate

Field	Value
Routes	<code>/employer/jobs</code> , <code>/employer/applicants</code> , <code>/employer/tests</code> , <code>/employer/interviews</code>
Expected	Pending, rejected, or suspended companies see clear blocked states, not broken API errors.
Result	
Notes	

Steps:

1. Log in as employer.
2. Open jobs, applicants, tests, interviews, and recommendations.
3. Confirm approved companies can use gated features.
4. Confirm non-approved company states show a clear access message.
5. Confirm blocked states include a useful link back to company profile when appropriate.

E3. Employer Company Profile

Field	Value
Route	<code>/employer/company</code>
Expected	Employer can view and update company profile fields according to permissions.
Result	
Notes	

Steps:

1. Open company page.
2. Check company status, profile fields, logo, and cover image.
3. Edit safe fields.
4. Save and refresh.
5. Confirm values persist.
6. Try invalid input and confirm validation messages.

E4. Employer Team Invitations

Field	Value
Route	<code>/employer/company</code>
Backend	<code>GET /company/invitations</code> , <code>POST /company/invitations</code> , resend, revoke
Expected	Owner/admin can list, create, resend, revoke, and copy invitation links when returned.
Result	
Notes	

Steps:

1. Open team/invitations section.
2. Create an invitation for a test email.
3. Confirm raw token/link appears if returned.
4. Copy the link.
5. Resend the invitation.
6. Revoke the invitation.
7. Confirm the list updates after each action.

E5. Employer Team Members

Field	Value
Route	/employer/company
Expected	Owner/admin can manage member role and status according to backend permissions.
Result	
Notes	

Steps:

1. Open team members.
2. Change a member role on safe test data.
3. Suspend/reactivate a member if allowed.
4. Remove a member if allowed.
5. Confirm the frontend does not assume wrong API response shapes.
6. Confirm token invalidation is handled cleanly for suspended/removed users.

E6. Employer Jobs List

Field	Value
Route	/employer/jobs
Expected	Jobs table loads with search, filters, pagination, and row actions.
Result	
Notes	

Steps:

1. Open jobs.
2. Search by job title.
3. Filter by status and application state.
4. Open job details.
5. Return to list.
6. Confirm filters and pagination remain usable.

E7. Employer Create Job

Field	Value
Route	<code>/employer/jobs/create</code>
Expected	Employer can create a job using canonical enum keys, not translated labels.
Result	
Notes	

Steps:

1. Click create job.
2. Fill required fields.
3. Select employment type, workplace type, experience level, and status options.
4. Save as draft.
5. Confirm backend accepts payload.
6. Confirm Arabic UI still sends stable enum keys.

E8. Employer Edit And Publish Job

Field	Value
Route	<code>/employer/jobs/{id}/edit</code>
Expected	Employer can edit and publish job without route or payload mismatch.
Result	
Notes	

Steps:

1. Open an existing draft job.
2. Edit title, description, salary, location, and requirements.
3. Save.
4. Publish the job.
5. Confirm status changes in list and details.

E9. Employer Job Skills

Field	Value
Route	<code>/employer/jobs/{id}</code>
Expected	Employer can attach and remove skills according to backend support.
Result	
Notes	

Steps:

1. Open job details.
2. Open skills section.
3. Add required skills.
4. Remove a test skill.
5. Refresh and confirm state persists.

E10. Employer Screening Questions

Field	Value
Route	/employer/jobs/{id}
Backend	GET/POST/PUT/DELETE /jobs/{job}/screening-questions
Expected	Questions can be listed, created, edited, and deleted from job details.
Result	
Notes	

Steps:

1. Open screening questions tab.
2. Create a question.
3. Edit the question.
4. Delete the test question.
5. Confirm validation and empty states.

E11. Employer Ranked Candidates

Field	Value
Route	/employer/jobs/{id}
Backend	GET /jobs/{jobPosting}/candidates/ranked
Expected	Ranking score and reasons render when backend returns them.
Result	
Notes	

Steps:

1. Open ranked candidates tab.
2. Confirm list loads or empty state is clear.
3. Check score, reasons, candidate metadata, and links.
4. Confirm missing ranking data does not break layout.

E12. Candidate Application Dependency

Field	Value
Scope	Public/mobile candidate app
Expected	Candidate can apply so employer can review applicant lifecycle.
Result	
Notes	If candidate app is not available, mark applicant/test/interview lifecycle setup as blocked.

Steps:

1. Open public company jobs.
2. Confirm the dashboard does not link to a missing `/jobs/{slug}` route.
3. Use candidate/mobile app if available to submit an application.
4. Return to employer dashboard.
5. Confirm the application appears.

E13. Employer Applicants List

Field	Value
Route	<code>/employer/applicants</code>
Expected	Applicants list loads and supports filtering, status actions, and details navigation.
Result	
Notes	

Steps:

1. Open applicants.
2. Filter by job and status.
3. Open applicant details.
4. Confirm candidate info, screening answers, CV, notes, tests, and interview panels load.

E14. Employer Application Status

Field	Value
Backend	<code>POST /applications/{jobApplication}/status</code>
Expected	Status transitions update UI and invalid transitions show useful errors.
Result	
Notes	

Steps:

1. Open an applicant.
2. Change application status to a safe next state.

3. Add required note/reason.
4. Submit.
5. Confirm status history updates.
6. Try invalid transition if safe and confirm error message.

E15. Employer Information Requests And Notes

Field	Value
Scope	Applicant details
Expected	Employer can request information and add internal notes without losing drafts on conflict.
Result	
Notes	

Steps:

1. Open applicant details.
2. Create an information request.
3. Confirm request appears.
4. Add an internal note.
5. Simulate or observe version conflict if available.
6. Confirm refresh/retry UX preserves the draft.

E16. Employer CV Summary And CV Files

Field	Value
Backend	GET/POST /applications/{id}/cv-summary , CV preview/download routes
Expected	Employer can view/generate CV summary and preview/download authorized CV files.
Result	
Notes	

Steps:

1. Open applicant details.
2. Open CV summary panel.
3. Generate summary if missing.
4. Preview CV.
5. Download CV.
6. Confirm unauthorized or missing files show clear errors.

E17. Employer Test Assignment

Field	Value
Backend	<code>POST /applications/{jobApplication}/assign-test</code> , <code>GET /applications/{jobApplication}/tests</code>
Expected	Employer can assign tests and see assignments.
Result	
Notes	

Steps:

1. Open applicant details.
2. Click assign test.
3. Choose test and deadline.
4. Submit.
5. Confirm assignment appears in applicant tests.

E18. Employer Test Grading

Field	Value
Backend	<code>GET /test-attempts/{attempt}/answers</code> , <code>POST /test-attempts/{attempt}/gradings/bulk</code>
Expected	Employer can grade submitted attempts.
Result	
Notes	

Steps:

1. Open a submitted test attempt.
2. Review answers.
3. Enter scores and feedback.
4. Submit bulk grading.
5. Confirm final grade and status update.

E19. Employer Test Retake And Deadline

Field	Value
Scope	Applicant test assignment
Expected	Employer can update retake/deadline settings when backend allows it.
Result	
Notes	

Steps:

1. Open applicant test assignment.
2. Update deadline.
3. Allow or deny retake if available.
4. Confirm updated assignment state.

E20. Employer Interviews List

Field	Value
Route	/employer/interviews
Expected	Interviews list loads and supports schedule, details, status, and history.
Result	
Notes	

Steps:

1. Open interviews.
2. Filter or select job/application scope.
3. Open interview details.
4. Confirm schedule and status history display correctly.

E21. Employer Schedule Interview

Field	Value
Scope	Applicant details or interviews page
Expected	Employer can schedule interview without payload mismatch.
Result	
Notes	

Steps:

1. Select an applicant.
2. Create interview.
3. Pick date, time, type, and interviewer.
4. Submit.
5. Confirm interview appears in list and applicant details.

E22. Employer Reschedule, Cancel, Attendance, Complete

Field	Value
Scope	Interview details
Expected	Employer can manage interview lifecycle and see history.
Result	
Notes	

Steps:

1. Open interview details.
2. Reschedule interview.
3. Mark attendance or no-show.
4. Complete interview.
5. Confirm status and schedule history update.

E23. Employer Evaluate Interview

Field	Value
Scope	Interview details
Expected	Employer can submit interview evaluation.
Result	
Notes	

Steps:

1. Open completed interview.
2. Add rating, recommendation, and feedback.
3. Submit evaluation.
4. Refresh and confirm evaluation persists.

E24. Employer Video Interview

Field	Value
Backend	POST /interviews/{interview}/video-session
Expected	Video session errors are understandable and valid sessions connect.
Result	
Notes	

Steps:

1. Open a video interview.
2. Start or join video session.

3. Confirm permission prompts are clear.
4. Confirm token expiry, denied access, and connection failures show useful errors.

E25. Employer Notifications

Field	Value
Route	/employer/notifications
Expected	Notifications list and unread count stay in sync.
Result	
Notes	

Steps:

1. Open notifications.
2. Mark one as read.
3. Mark all as read.
4. Refresh and confirm state persists.

Cross-Cutting QA

C1. Arabic And RTL

Field	Value
Scope	Admin and employer
Expected	Arabic UI keeps business logic stable using enum keys.
Result	
Notes	

Steps:

1. Switch language to Arabic.
2. Repeat login, list filters, job create/edit, status changes, reports, and notifications.
3. Confirm the UI is RTL.
4. Confirm backend payloads still send stable keys such as `full_time`, not translated labels.
5. Confirm long Arabic text does not overflow buttons, cards, tables, or dialogs.

C2. Authorization And Token Invalidation

Field	Value
Scope	Admin and employer protected routes
Expected	Unauthorized or invalid-token users are redirected or shown access denied cleanly.
Result	
Notes	

Steps:

1. Open protected pages while logged out.
2. Confirm redirect to login.
3. Suspend/remove an employer member from another session if safe.
4. Confirm invalidated session logs out or shows access denied cleanly.

C3. Loading, Empty, Error, And Partial Data States

Field	Value
Scope	All core pages
Expected	Pages show consistent loading, empty, error, and partial-data states.
Result	
Notes	

Steps:

1. Test each major table with data.
2. Test with filters that return no data.
3. Observe loading states during slow network.
4. Simulate API failure if possible.
5. Confirm failures are understandable and do not crash the whole dashboard.

C4. Accessibility Smoke Test

Field	Value
Scope	Core forms, dialogs, and action buttons
Expected	Keyboard, labels, focus, dialogs, and icon buttons are accessible.
Result	
Notes	

Steps:

1. Navigate login with keyboard only.
2. Navigate create/edit company forms with keyboard only.

3. Navigate create/edit job forms with keyboard only.
4. Open and close dialogs with keyboard.
5. Confirm visible focus states.
6. Confirm form fields have labels.
7. Confirm icon-only buttons have accessible names or tooltips.

C5. Performance Smoke Test

Field	Value
Scope	Login, admin dashboard, employer dashboard, reports, jobs
Expected	Initial load is fast enough and route chunks load without blank screens.
Result	
Notes	

Steps:

1. Run a production build.
2. Confirm route-level lazy chunks are generated.
3. Confirm no single app chunk contains all admin and employer pages.
4. Open login on a clean browser session.
5. Open admin dashboard.
6. Open employer dashboard.
7. Open reports and interviews.
8. Confirm no blank lazy-loading states remain stuck.

Known Blockers To Track

Blocker	Area	Expected Owner	Status
<code>GET /admin/audit-logs</code> returned <code>500</code> in previous QA.	Admin audit logs	Backend	
Candidate/mobile apply flow is outside this dashboard.	Applicant lifecycle	Candidate/mobile app or backend/public FE	
<code>/auth/me</code> does not include employer company/membership data.	Protected route context	Backend or frontend fallback	

Final Sign-Off
